Hi Julie,

Damon was very helpful in explaining different LC/MS strengths and weaknesses. He also mentioned that Agilent could possibly sell demo units at 30-50% discounts depending on age. \$300,000 is their most expensive machine. We could possibly get something in the \$90,000 to \$150,000 range used, depending on the type of machine we picked. That would come with the same warranty as a new machine and the same training.
